Try it for yourself and have fun! This is PElectro. ************** Install this program, visit the website and make some circuits. Features: - Applications - Programs - Tools - Graphing function - Oscilloscope - Meter analysis - Displays - Alarms - Tests -... In this tutorial, we will see some professional landline Phreak hacking tools. You will learn how to hack into an active landline network in just several minutes. You will start this tutorial with an active landline network, a telephone, a sound card, and an active packet sniffer. You will learn how to capture landline packets by using a noise reducing microphone, you will open the packet capture with Wireshark, you will remove the Wireshark capture, you will close the noise removing recording, you will patch the listening modem, and you will patch the landline modem. All of this will take you only few minutes. This is the main advantages: 1) Our tools are too secure, and you have to learn how to use a packet sniffer. In contrast, we have some simple tools that will open the way for you, and you will learn step by step. 2) Our tools are very fast, and you can save the noise recordings in some other software, such as Audacity. 3) Our tools are too expensive, and so they will cost more than other professional kits, but you don't have to pay to learn. All of our tools and our tutorials are for free. If you like our work, please remember: This is a free project, a cheap price for a cheap public service.
